ABSTRACT

Balanced Diet is a control of eating habits for someone to achieve the objectives of the diet itself, either to lose weight or to gain weight. The number of calories from the food we eat every day determines whether a diet that we do may lose body weight or increase body weight. But not everyone can calculate their daily calorie consumption, because of that, many people have problems with being overweight or underweight. Therefore, a website that can calculate a person's daily caloric intake, can help someone to achieve their diet goal.

We conducted a study to identify the key topics and issues that users highlight in their reviews of diet-tracking apps on Google Play Store. Identifying the topics that users frequently mention in their reviews of these apps, along with the user ratings for each of these apps, allowed us to identify areas where further improvement of the apps could facilitate app use, and support users' weight loss and intake management efforts.

It was found that nutritionists provide the food details in the morning and people are not able to cope up with the ingredients and even in the premium membership there is a delayed response in most of the health websites.

HTML and CSS has been used for frontend with other technologies like JavaScript. PHP will be used for backend with SQL as a Database.

This website has five main features, namely the calorie tracker, diet chart, blog page and food calorie list. Therefore, users can get a variety of information about diets and calories, so it can help them to achieve their weight loss goal.

INTRODUCTION

Globally, the prevalence of obesity has increased from 28.8 to 36.9 per cent in men and from 29.8 to 38.0 per cent in women between 2008 and 2013. Physical inactivity and nutritional transition along with increased consumption of refined carbohydrates, processed foods, change in the type and amount of fats has led to the increased prevalence of overweight and obesity in India over the past decade. While on one hand proliferation of information and communication technologies (ICTs), more profusely that of mobile phones, is blamed in part for physical inactivity and associated lifestyle diseases, on the other, researchers have been increasingly documenting the use of mobile phones as Behaviours Change Communication (BCC) tools for encouraging physical activity and healthy diets, fight depression, quit smoking and manage diabetes and other non-communicable diseases (NCDs). The advances in mobile technology have led to the concept of mobile-health (mHealth) and use of mobile phones as an important platform for the delivery of health communication interventions. Multiple studies have shown the successful use of mHealth in managing various health conditions.

With 220 million users, India ranks second in the world smartphone market surpassing the US market. Indian Council for Research on International Economic Relations has reported that 90 percent of smartphone users use apps (mobile applications). It was estimated that the number of mobile health applications available to consumers was more than 165,000 in 2015. Thousands of calorie counting apps developed in various countries are available in the mobile play stores claiming to help in weight management. However, the number of studies that analysed their quality and effectiveness is very limited in developing countries, and no such study has been done in India. Using the following research, we had developed an app using html, CSS, java script as frontend and php and MySQL as backend.

1.1 Motivation

Proper nutrition is a means of ingesting conduct for a person to obtain the goals of the food regimen itself, both to shed pounds or to gain weight. The quantity of energy from the food we devour each day determines whether a diet that we do may additionally lose body weight or growth frame weight. but no longer anybody can calculate their daily calorie consumption, due to that, many human beings have issues with being overweight or underweight. Therefore, a website which can calculate a person's daily caloric consumption, can assist someone to acquire their weight loss plan purpose. This is the main motive of the site.

1.2 Issues

The main issue with other websites targeting Western food culture is to consider. Calorify has added food types to suit local needs. Even the ingredients and premium membership experience lags behind most health websites. That's why we created a website based on the needs of our users.

Problem Definition

2.1 Critical Issues

People with intellectual disabilities (ID) have a high prevalence of physical inactivity and high rates of preventable health conditions, including obesity and cardiovascular disease. Increased participation in fitness and wellness activities can improve their overall health and well-being. However, many fitness and wellness organizations do not know how to effectively serve this population nor how fitness and wellness organizations do not know how to effectively serve this population nor how to support their inclusion into their programs.

Obesity is a complex disease involving an excessive amount of body fat. Obesity isn't just a cosmetic concern. It's a medical problem that increases the risk of other diseases and health problems, such as heart disease, diabetes, high blood pressure and certain cancers.

There are many reasons why some people have difficulty losing weight. Usually, obesity results from inherited, physiological and environmental factors, combined with diet, physical activity and exercise choices.

Being inactive can lead to fatty material building up in your arteries (the blood vessels that carry blood to your organs). If the arteries that carry blood to your heart get damaged and clogged, it can lead to a heart attack. If this happens in the arteries that carry blood to your brain it can lead to a stroke. The good news is there are many ways to reduce the risk of this happening.

2.2 Problem Description

The main problem with other website it is designed with western food culture keep in mind, with Calorify we added the type of food according to local needs. It was found that nutritionists provide the food details in the morning and people are not able to cope up with the ingredients and even in the premium membership there is a delayed response in most of the health websites. So we have created a website for keeping health record of the persons.

Project Description

3.1 List of Modules

1. Customer/Client
2. UI/UX designer
3. Database administrator
4. Nutritionist
5. Blogger
6. Admin

3.2 Requirement Specification

3.2.1 Software Requirement

1. Text Editor
2. MySQL
3. Xampp
4. Web browser

3.2.2 Hardware Requirement

1. Personal Computer

operating system requirements → windows xp and above

ram-> 4gb and above

2. Mobile

ram->1 gb and above

browser-> chrome browser or Firefox browser required

3. Internet

250kbps + required for fast loading

3.3 Module Description (Stakeholders)

1. CUSTOMER/CLIENT

The customer inputs the weight and height frequently to let the nutritionist know about what to prescribe next.

People who track food achieve more than double the average weight loss and members lose weight 3x faster when doing it with friends. Calorify combines these to create the most powerful solution for healthy, sustainable weight loss.

2. UX Designers

A UI designer is responsible for creating interactive programs that enhance a customer's experience with a brand and facilitate an enjoyable experience on the business's website. UI designers also need to have a working understanding of coding and transfer the brand's strength through the interface of a product.

3. DATABASE ADMINISTRATOR

Database administrators are responsible for accurately and securely using, maintaining and developing computerised databases within a wide range of public and private sector organisations. . Maintaining the PHP and MySQL connection .It is responsible for securing customer login data and personal info. And maintaining the information if the user is revisiting the website.

4. NUTRITIONIST

- If clients require further assistance, they can contact the nutritionist.
- Nutritionists will provide a brief information about how much calories need to be buried and different methods by which calories can be burnt or increased.
- Advising and presenting a balanced nutritional strategy.
- Discussing and advising on weight-management plans.
- Assisting clients with nutritional goals and offering a sound nutritional plan for optimising health.
- Recognizing appropriate behavioural-change modifications and dietary approaches for different ages and populations.

5. Blogger

It adds latest blogs about the food related thing and also updates what are the myths and reality of diet. It is mainly responsible for maintaining the blog page of the website. Blog page contents are created and managed by the blogger, the person who was hired.

6. Admin

He is the person maintaining the whole site, if anything has gone wrong every other stakeholder will go through admin for help. Any data published or being added to website is done after being supervised by the admin.

IMPLEMENTATION OF PROJECT

4.1 Sample Code

Login.php

```
<?php

session_start();

include("connection.php");
include("functions.php");

if($_SERVER['REQUEST_METHOD'] == "POST")
{
    //something was posted
    $user_name = $_POST['login'];
    $password = $_POST['password'];
    $_SESSION['user']=$_POST['login'];

    if(!empty($user_name) && !empty($password) && !is_numeric($user_name))
    {

        //read from database
        $query = "select * from users where user_name = '$user_name' limit 1";
        $result = mysqli_query($con, $query);

        if($result)
        {
            if($result && mysqli_num_rows($result) > 0)
            {

                $user_data = mysqli_fetch_assoc($result);

                if($user_data['password'] === $password)
                {
                    $_SESSION['user_name']=$_POST['login'];
                    $_SESSION['user_id'] = $user_data['user_id'];
                    header("Location: terminal.php");
```

```

        die;
    }
}

echo "wrong username or password!";
}else
{
    echo "wrong username or password!";
}
}

?>

speak, of food blogging, the culinary magazines are on top. This is literary

```

the case with Food52, which ranks amongst the gods of the social media food show with no less than 2.7m followers on Instagram. Like all the respected magazines out there, Food52 has its “how to” perks – we can assure you, you won’t get enough of it.

Here you can find how you can preserve your favorite type of pumpkin, the latest trends in home design, and a hearty recipe for a cheesy green Shakshuka – all packed into beautiful stories, sufficiently long enough to keep you company over your morning coffee, and delivered to you directly by expert chefs and artistic decorators.</p>

<p class="text"> And when you’d have had enough of indulging in the mouth-watering recipes and heart-stealing pictures, Food52 has a shop area prepared for you, also packed with home and kitchen goodies.</p>

  <p class="text">
```

A self-proclaimed “food lover and number cruncher,” Beth Moncel created Budget Bytes in 2009 after earning a college degree in nutritional science and working a low-paying job. She found herself unwilling to sacrifice healthy eating on a tight budget and began tracking the cost of her food, which cut her grocery bill in half.

More than 10 years later, Moncel’s Budget Bytes boasts countless healthy, budget-friendly recipes, instructional how-tos, pantry staples, and meal prep content. Budget Bytes became a cookbook in 2014, and in 2016, the blog won the Best How-To Food Blog Award from Saveur magazine.

Every Budget Bytes recipe includes the cost per recipe and cost per serving. There's also a Budget Bytes app that includes features like step-by-step photos, built-in timers, and adjustable serving sizes.</p>

  <h3 class="title">BUILDING WELLNESS</h3>
  <p class="text">This is a blog for the average person who cares
about health and fitness.
```

From interval training to running, kickboxing to Zumba, food journaling and calorie counting, this blog will explore the methods (and madness) of the everyday person trying to get in – and stay in – shape.

This is not just about reaching a weight goal by a certain deadline – although we can talk about that. This is not just about training for a big-time event like a marathon – although we will look at that, too.

This blog is about the daily steps on the road to health and fitness for all of us, whether it began years ago in youth sports – or just in the last five minutes. It's about going to the gym, or going outside, and getting a good workout. It's about finding ways to shop, cook and dine in a way that supports a healthier lifestyle.

A warning: This blog is not written by that perfect, beautiful trainer who bench presses Priuses and never eats Pringles. This blog will be coming from a place of countless Weight Watchers meetings, failed attempts at fad diets and an undiagnosed but certainly real fear of the scale.

And yet there is always the need, after falling, to get back up and get back to the gym. In other words, keep your Chin Up. Don't get down and stay down. Keep fighting. After years of covering the best professional,

collegiate and prep school athletes as a sports writer, I wanted a fitness blog for the rest of us.

</p>

<p class="text">So, if you've ever sought a bike ride to clear your head...

Or thrilled in the delight of finishing your first 5K ahead of the street sweepers...

If you've ever gone to the gym instead of MC DONALDS

Or gone to the gym after your trip to MC DONALDS

If you've ever been so sore after working your triceps that it hurt to shampoo the next day...Or thought burpee was a brand of garden seed and planks were for pirates...Then I invite you to come back here and check out the blog, post your comments and suggestions and share your struggles and triumphs. Or, just laugh at and make fun of mine.</p>

Discussion and Results

Tracking calories is a tested method of weight loss. Calorie deficit helps one lose weight while calorie surplus helps in gaining. A calorie deficit is created when you burn more calories than what you have consumed.

It helps in understanding the eating patterns and habits of an individual, making it easier to monitor diet behaviours. This includes knowing the food items that you usually crave for, and taking measures to counter such cravings.

Tracking calories from each macro gives an estimate of the quality of food one consumes and helps in modifying the same. Carbs, protein, and fat are the three important macronutrients required by the body, and tracking the calories you consume from each of these macros helps determine whether your body is receiving all of them in the required quantity or not.

Calorie tracking is a good estimate of keeping track of your fitness goals to achieve your intended physique. Be it losing fat or gaining muscle, you will never find yourself setting your eyes off your aim.

It can help in achieving the desired goal of weight loss or gain without having to cut down on an entire food group or to eat according to some strange time schedule. Now that is a wonderful piece of information, right! With calorie tracking, you do not have to give up on your favourite food.

Tracking calories will help you eat your food guilt-free. The next time you have a pizza, don't walk down the lane of guilt. Simply note down the calories you consumed with the pizza and then make adjustments to eat within your required calorie intake.

CONCLUSION

Calorify has been implemented using HTML, CSS, and JAVASCRIPT for frontend and PHP and MySQL as backend technologies. It is believed that the application would give rise to healthy living amongst the average person, due to the plus side that it does not require an additional hardware (bands or watches) to function with. This project has been deployed as a web application to allow easy access for users. However, there are multiple competitors available in the market targeting different users but we have our target based on the Indian market and we are constantly updating the site with more and more new features.

Future Works

PAYMENT GATEWAY

A payment gateway is **a technology used by merchants to accept debit or credit card purchases from customers**. The term includes not only the physical card-reading devices found in brick-and-mortar retail stores but also the payment processing portals found in online stores.

This gateway could be included for ease of access and payments.

Social Media Integration

Website social media integration is the process of extending your marketing by redirecting your social media followers to your website and making your social platforms accessible to your target audience and customers via your website.

3D Elements & Motion UI

3D visual elements have become immensely popular in the recent past, and we're sure that this trend is likely to see a steep upward shift in the coming years. Users are more likely to spend more time on your site and interact with a 3D design as it provides an exciting experience.

This technology is especially useful for the entertainment industry and gaming but is also popular in science, medicine, architecture, interior design, engineering, and so on. Motion UI helps implement enhanced UI for animation. It's much simpler to work with compared to JavaScript.

Push Notifications

One normally associates push notifications with mobile apps – however, they are quickly becoming important in web development. It notifies users whenever new content is posted, thereby eliminating the need to check emails or browse sites to check.

Users can be notified at any time, and it's a way of communicating directly with clients, regardless of where they are. It enables product branding, helps the target audience to make decisions quickly with the delivery of genuine messages, and the business can close more sales.
